

Pharma Packaging Systems was established to become the world leader in design and manufacture of electronic tablet counting systems. With over 50 years of combined experience the technology is based on sound practical knowledge whilst embracing new developments in software and hardware. The PharmaLift is the ideal bulk feeder for integration with either tablet counting machines or blister machines.

Pharmalift provides a large capacity bulk hopper at operator level that will feed on demand to the filling machine. Touch-screen / PLC control system allows the vibratory feed speed to be optimized for each product and allows start and stop functions as well as test and displays machine status and any alarm signals.

Pharmalift features:

- Large product hopper at low level
- Limited contact parts for quick clean down
- No format parts
- Various configuration options
- Feeds counters or blister machines
- Touch-screen / PLC control system
- Latest cGMP design
- Integrated chip and dust extraction
- Full IQ/OQ Documentation

Tablet Feeders

Linear vibratory drive feeds product over perforated section to remove dust and chips before passing the product in the elevator lift bucket. When the bucket is filled to correct level with product it is raised by a pneumatic rod-less cylinder.

When bucket arrives in position at the filling machine it will park and await a call signal from the master machine and on receipt of the signal the chute will extend to meet the machine hopper and the bucket gate opens to release the product. This cycle will continue until the filling machines demands are met.
