Filtec Automation offer a ***Semi Automatic Bottle Rinser*** to rinse bottles with water or ozonated water. Bottles are hand loaded into the rinser pockets in the star wheel as it rotates. A pump supplies rinse water under pressure to the rinse nozzles to rinse the inside of the bottles. The bottles then drain before being ejected to an external bin.

The star wheel is a change part that is quickly changed out when bottle sizes are changed.

A very basic control system is supplied with the machine allowing the operator to adjust the speed to the desired output.

- ***ROBUST***
- ***EFFICIENT***
- ***SAFE***
