

Although primary activity at Pharma Packaging is focused on tablet counting machinery PPS has developed a reputation for solutions for custom pharmaceutical applications as well as acting as a complete line integrator to provide complete turnkey packaging lines. In this respect PPS takes care of all aspects of the project with full management and responsibility included for complete line including support and after sales.

PPS builds 2 bottle cleaning systems for integration into packing lines, one with simple deionised air wash and vacuum/blowing and a higher speed system with full bottle inversion for validated cleaning applications on both glass and plastic bottles.

## Additional activities:

- Bottle cleaning machines
- Sachet/special application counters
- Desiccant/cotton inserters
- Induction sealing/labelling/cartoning machines
- Full integration and synchronisation
- Full documentation service

PPS has a range of tablet counters suitable for integration with sachet machinery offering speeds up to 240 packs per minute with ultimate flexibility allowing both simplex and duplex applications with a range of counts as well as both single and multi product filling. All systems are fully integrated with the sachet machine so the solution is fully synchronised.

Pharma Packaging Systems has been integrating turnkey packaging lines for many years and will work with the customer to find the correct solution including full layout design, full integration of third party machinery, complete documentation supply as well as full installation, commissioning and line responsibility. Lines supplied are ultimately flexible and applications to date include clinical trial lines, medium speed high flexibility lines as well as high speed solutions including "end of line" systems.
